## Business History

Established in 1985 as an Automotive Equipment Distributor. As increasing demand for turn key operations in automotive repair shops, quick lubes and automotive dealerships, Shop Equipment evolved from sales only to full service. Since 1997 Shop Equipment has worked with many local architects, engineering firms, general contractors and owner/principles in designing automotive maintenance facilities. Our expertise has also evolved from the placement of maintenance equipment to also include all support systems (air piping, lubrication systems and exhaust evacuation systems and parts department layout and design).

Our design criteria revolves around the principles or owners specific needs in a facility. To not only properly do an efficient equipment and systems layout, but also anticipate unforeseen design issues, safety concerns, and keep projects on time and on budget. Our goal on all projects is to not meet the customer's expectations, simply exceed them. Our company consistently strives to be the preferred automotive equipment supplier partner on all existing and future projects. Shop Equipment doesn't follow the standards, it sets the standards.
